

Inspection Sync for Raters

What is the Inspection Sync Tool?

Ekotrope's Inspection Sync Tool is a premium add-on to Ekotrope RATER that allows you to import inspection data into Ekotrope energy models and eliminate duplicate data entry. Rather than manually transcribing data from your preferred data inspection tool into Ekotrope, you can export this data to a standard data format and, with Inspection Sync, upload it into RATER. Ekotrope will automatically update all applicable fields of the energy models and then notify the user, detailing whether or not the transmission was successful.

Inspection Sync for Raters:

When manually transcribing data from an inspection tool into Ekotrope RATER, raters lose time, add significant labor costs, and open themselves up to the opportunity for error. Builders want reports as soon as possible, and our Inspection Sync tool enables you to update projects and send the accompanying reports to your builders all in the same day with just a few clicks. The typos and mistakes that can occur during manual transcription can cause undue failures, requiring backtracking, added QA costs, and ultimately unhappy clients. Our Inspection Sync tool aims to streamline and expedite your data collection and inspection process, saving you time and money while providing a better service to your clients.

Features:

- ✓ Seamless import/export process with your preferred data collection tool
- ✓ Automatic energy model updates to each project
- ✓ A comprehensive report detailing the success of the transmission of all data points
- ✓ Fast data lookup and matching of mechanical equipment library components using model numbers
- ✓ Quick and efficient data transcription in minutes
- ✓ Ability to update diagnostic test results in each unit of a multi-family building all at once
- ✓ Ability to input data from all inspections at once

Record Field Data

Recording inspection data should end when you record it the first time in your inspection app, but now that's just the start.

Transfer Data Manually

You spend too much time transferring data into Ekotrope Rater. Your staff must re-enter data for each inspection before it can be sent to your client.

Continuous Errors

Transcribing data by hand is error-prone, a bottleneck in your workflow, and takes valuable time away from other value add activities.

Not Anymore, Streamline with Inspection Sync

With Ekotrope RATER Inspection Sync you can eliminate data-entry time while ensuring inspection data is correctly synced to each energy model.
